SUMMARY

AI Engineer / Machine Learning Engineer with hands-on experience building production-ready AI applications, including Retrieval-Augmented Generation (RAG) chatbots and deepfake detection systems. Strong expertise in Python, machine learning pipelines, data preprocessing, model training, and deploying AI-powered web applications using Flask and Streamlit.

SKILLS

Programming Languages: Python, Java, SQL

Machine Learning: Supervised Learning, Deep Learning (CNNs), NLP, Feature Engineering, Model Training, Model Evaluation

Frameworks & Tools: Flask, Streamlit, FAISS, Git, Jupyter Notebook, Google Colab, Anaconda

Engineering Concepts: Data Preprocessing, Classification, Model Deployment, REST APIs

EDUCATION

International Institute of Information Technology, Pune 2022 – 2026

Bachelor of Engineering (B.E.) in Information Technology

Vidyadham Junior College, Chhatrapati Sambhajinagar 2022

Higher Secondary Certificate (HSC)

Podar International School, Chhatrapati Sambhajinagar 2020

Indian Certificate of Secondary Education (ICSE)

INTERNSHIP EXPERIENCE

AI-ML Virtual Internship — AICTE 2024

- Developed and evaluated machine learning models using Python for classification and prediction tasks
- Performed data preprocessing, feature engineering, and exploratory data analysis on real-world datasets
- Assessed model performance using standard evaluation metrics and improved accuracy iteratively

PROJECTS

Retrieval-Augmented Generation (RAG) PDF Chatbot

- Built a RAG-based chatbot enabling semantic search across multiple PDF documents
- Implemented FAISS vector indexing and Sentence-Transformers for efficient document retrieval
- Integrated Google Gemini LLM for context-aware response generation
- Deployed the application using Streamlit for real-time document question answering

Deepfake Detection System (Smart India Hackathon)

- Developed a deepfake video detection system using Convolutional Neural Networks (CNNs)
- Preprocessed data and trained models on FaceForensics++ and DeepfakeTIMIT datasets
- Built a Flask-based web interface for video upload and prediction

Speech-to-Text Translation System

- Designed and implemented a speech recognition and translation pipeline using Python
- Integrated Google Speech Recognition and Google Translate APIs for multilingual support
- Enabled real-time microphone input with audio output using gTTS

CERTIFICATIONS

GenAI-Powered Data Analytics Simulation — Forage (July 2025)
